Description: Upright oval, side A flat, side B strongly convex. Shape 2-3. Bronze.

A: Chnoubis-snake with unspecified head, rays around the head. Around him, triads of animals: at the top scarabs; birds and snakes on the left; quadrupeds and (fish-like) crocodiles on the right.

B: Frontal view of an Anguipes in armour, with elongated trunk, head to left. Both hands raised, right hand holding a round shield, cock-head and whip not indicated. Hollowed depression in the zone of the heart. On the two sides and around: caracteres and letters, mostly vowels, making no sense. Above the left hand: $\nu\alpha$; below the elbow: μ ; on the two sides of the waist, respectively: $\zeta\eta\mu\upsilon\sigma\iota$ and $\iota\eta\nu\lambda\sigma$ (inverted) $\mu\upsilon\sigma$; beneath the snakes: $\alpha\upsilon\upsilon\iota\mu\eta\upsilon$ → voces including vocales.

The gem belongs to the Anguipes-Chnoubis group (for a list of items in this group, see [Michel, BM on Cbd-1005](#)). See also [Cbd-1005](#).
